Labcorp Oklahoma, Inc. Test Directory

CT/GC/TV Amplified-Cervix (send out)

Order Name: CT/GC/TV Cervix Test Number: 5195343 Revision Date: 06/25/2024

TEST NAME		Ν	NETHODOLOGY	LOINC CODE	
CT/GC/TV Amplified-Cervix (send out)			Nucleic acid amplification (NAA)	See Notes	
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	1	Endocervical swab	Cobas(R) PCR Female Swab Sample Kit	Room Temperature	
Instructions	Collection: Collecting an endor two swabs one for initial cleanir and a second for specimen coll 3) Use a second swab to collect Withdraw the collection swab w score line. 6) Do not submit bot thoroughly exposed to the trans Storage Instructions: Room te	ha (Gen-probe) Endocx/ureth swab - cobas(R) PCR Female Swab Sample Kit ction: Collecting an endocervical swab specimen for use in NAAT testing procedures involves the use of a speculum and includes the use of wabs one for initial cleaning of the cervix to remove excess mucus from the cervical os and surround mucosa (this swab should be discarded), second for specimen collection. 1) Use one of the swabs in the collection kit to clean the mucous from the cervix. 2) Discard the cleaning swab. e a second swab to collect the specimen by insertion of the swab into the endocervical canal followed by gentle rotation of the swab. 4) iraw the collection swab while avoiding contact with the vaginal mucosa. 5) Place the swab into the PCR media tube and break the shaft at the line. 6) Do not submit both swabs. 7) Tightly and securely seal the PCR media tube. 8) Mixed to ensure the collected specimen has been ughly exposed to the transport media which contains nucleic acid stabilizing agents. ge Instructions: Room temperature Stability: Room temperature: 365 days Refrigerated: 365 days e for Rejection: Contamination, Bloody; 2 swabs in tube; less than 2 mL liquid; no swab inside the tube or inverted swabs
