

Lyme CNS Infection IgG CSF/Serum reflex to Index

Order Name: **Lyme Inf CSF/S IgG**
Test Number: 5197285
Revision Date: 02/02/2026

TEST NAME	METHODOLOGY	LOINC CODE
Lyme CNS Infection IgG CSF/Serum reflex to Index	Enzyme-Linked Immunosorbent Assay (ELISA)	92815-0

SPECIMEN REQUIREMENTS				
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment
Preferred	1.2 mL Each	CSF and Serum	Sterile Screwtop Container and Clot Activator SST	Refrigerated
Instructions	<p><i>This is for Ascension Local Area Hospitals Only</i></p> <p>Specimen: Both Serum and CSF (1.2 mL Serum AND 1.2 mL CSF) Container: CSF: Sterile vial Serum: Gel Barrier Tube or Red-Top Tube Collection: Serum and CSF samples need to be collected within 24 hours of each other, preferably at the same time. Label CSF vial as spinal fluid or CSF. CSF aliquot should be from the second, third, or fourth CSF vial collected during the lumbar puncture. Do not submit CSF from the first vial due to the possibility of blood contamination, which will cause specimen rejection. Centrifuge and aliquot serum into a plastic vial. Label as serum. Band specimens together. Stability: Room temperature n/a, Refrigerated 11 days, Frozen 35 days Cause for Rejection: Gross hemolysis, Gross lipemia, CSF contaminated with blood</p> <p>Testing referred to Mayo Clinic Labs ;V#LNBAB This test begins with IgG screening of the spinal fluid specimen. If the screen is negative, no additional testing will be performed. If the screen is positive, the paired CSF and serum specimens will be used to establish the antibody index. In order to establish the antibody index, the paired serum and CSF samples (collected 24 hours of each other) are tested on the same run using quantitative assays to determine levels for the following analytes: 1. Anti-Borrelia species IgG levels in CSF and serum 2. Total IgG in CSF and serum 3. Albumin in CSF and serum These additional tests are necessary in order to normalize the level of Anti-Borrelia antibodies to total IgG and albumin in the CSF and establish the antibody index ratio for anti-Borrelia antibodies in CSF-to-serum. This testing is performed at an additional charge.</p>
