## Helminthosporium halodes IgG

Lab Section

Reference Lab

Order Name: HELMINTH G Test Number: 5500461 Revision Date: 12/14/2022

TEST NAME			METHODOLOGY	LOINC CODE	
Helminthosporium halodes IgG			Enzyme immunoassay (EIA)	35555-2	
SPECIMEN REQUIREM	ENTS				
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	0.3 mL (0.1 mL)	Serum	Clot Activator SST	Room Temperature	
Instructions	Specimen Storage: Room te Specimen Collection: Not Av Special Instructions: Values one assay method be used co	cimen Type: Red-top tube or gel-barrier tube cimen Storage: Room temperature cimen Collection: Not Available cial Instructions: Values obtained with different assay methods should not be used interchangeably in serial testing. It is recommended that only assay method be used consistently to monitor each patient's course of therapy. cimen Stability: Ambient: 14 days, Refrigerated : 14 days, Frozen: 3 months			
GENERAL INFORMATI	ON 2 - 4 days				
Clinical Use	measurement of alle quantitative IgG test represent the expect	The clinical utility of food-specific IgG4 tests has not been clearly established. Although there have been many publications concerning the measurement of allergen-specific IgG, the clinical utility of such tests has not been established except in special situations. Thus, the quantitative IgG test should only be ordered by specialists who recognize the limitations of the test. The normal reference ranges reported represent the expected results for individuals who have no unusual exposure and have not been immunized with the indicated allergen. The ranges reported have no disease-associated significance.
