GENERAL INFORMATION		
Expected TAT	3 - 7 days	
Clinical Use	High resolution HLA typing is preferred for matching of bone marrow transplant donors and recipients. Other clinical indications may require high resolution typing to rule out alternative allele combinations.  High resolution typing for DQB1 will meet the following criteria: All ambiguities within exons 2 and 3 will be resolved. Those ambiguities that remain will be reported as an allele code. This test is for single locus typing at high resolution.	
Performing Labcorp Test Code	167232	
Notes	Sequence-based typing (SBT), sequence-specific oligonucleotide probes (SSOP), and/or sequence-specific primers (SSP) as needed to obtain the required resolution.  Labcorp Test Code: 167232
